

Designed for any organization with unique programs, clients, cases, or geographic divisions to monitor. The Hub tracks industry and client-specific performance and helps employees monitor information that might present new client engagement opportunities, guide national initiatives, and more.

All corporate data and publication resources related to a specific industry, client or other relevant entity are redirected here to simplify your information search. Access and contribute industry metrics and reports, client-specific data, analysis, and deliverables. You may also provide outward facing pages to your clients to provide them the same access to data and other client-specific deliverables.

The Data Hub service from Knoema offers:

Curated Data

The hub organizes regularly updated critical statistics, drawing information from industry, subscription, and global data providers.

Analyze a specific entity or an entire industry; examine the FTEs you've invested and expected returns; potential data views are endless.

Intelligent Data Tools

Search Data-specific search engine that returns data and visualizations.

Visualizations Suite Create custom visualizations ready for export or integration with interactive online dashboards.

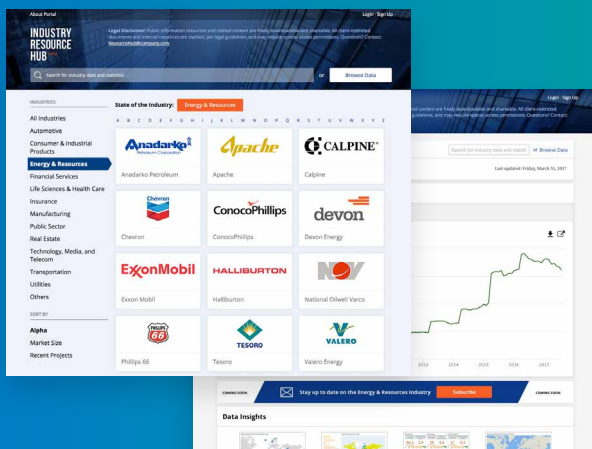

Future Lens View your proprietary models, running on the data stored in the Hub; modify expected trends to review alternative scenarios during planning discussions.

Information Resources

Industry news feeds, recent reports and press releases, event schedules, and document libraries may be featured alongside the data for additional contextualization and to improve the relevance of your interactions with clients.

MT MarketTap

Need custom information for your market? Ask about our trained local data networks.

- ✓ Facilitate decision making with relevant data from authoritative sources
- ✓ Expand your industry knowledge to grow your business
